

# TELEKURS iD HTML LINK: TECHNICAL INSTRUCTIONS

## Types of use

Telekurs **iD** html Link can be used with various standard software packages, for proprietary bank systems or third-party applications (portfolio management, risk management, etc.).

## Script

Bank applications access the Telekurs **iD** html server in the same way as for the display application itself. For each instrument in the bank system, the instrument summary from Telekurs **iD** html is shown. The example shown here is a possible Visual Basic script for Microsoft Internet Explorer:

```
Option Explicit
Dim Site
Dim oIE 'As InternetExplorer'

Site =
"http://www.tkflink.com/idhtml/detail/vdb_red.jsp?Action=InstrumentSummary&listing=1205604,380,1&client=extern"
Set oIE = Wscript.CreateObject("InternetExplorer.Application")

oIE.Navigate Site
oIE.AddressBar = False
oIE.StatusBar = False
oIE.Toolbar = False
oIE.MenuBar = False
oIE.Width = 800
oIE.Height = 700
oIE.Visible = True
```

When the instrument number is exchanged in the script, the new instrument number is shown next time the system is accessed. Other scripts in addition to Visual Basic can also, of course, be used.

## Telekurs iD html Links

The following links can be used to access the instrument detail in Telekurs **iD** html direct from an application. The first time a link is used, the user must log in via Telekurs Financial Frontdoor using the appropriate user ID and password. These details can also be sent directly with the call command.

The following access options are available:

**www.tkfweb.com/..... (via Internet)**    or    **www.tkflink.com/..... (via Telekurs Extranet)**

The "listing=" parameter requires a Telekurs listing ID, which consists of: Valor number, exchange code, currency code.

**Important: It is essential that each link ends with &client=extern.**
